Technical skills

Security

- Identity & access management
- Azure access reviews
- Firewall / VPN, malware analysis
- MITRE ATT&CK

Programming & scripting

- Python, C++, Java, JavaScript
- PHP, R, PowerShell, Bash
- HTML / CSS

Databases

- SQL, PostgreSQL, MySQL

Tools & platforms

- Azure, ServiceNow, Linux
- jadx, Androguard, Wireshark
- VEINS, SUMO, OMNeT++

Certifications

- SC 900, Microsoft Security
- AZ 800 and DP 900, Microsoft
- Cybersecurity in SDLC (2022)

Award

Second place

CyberEdu4Teens Hackathon

Google.org and SnT, 2025

Created OopsOnline, a cybersecurity awareness card game for teenagers.

Education

MSc Cyber Security & Cyber Defence

University of Luxembourg

2024 to 2026

Thesis and defence: 17.6 / 20

Bachelor of Computer Science

Fergusson College, Pune

2018 to 2021

GPA: 9.89 / 10

Professional experience

Research Intern, MSc Thesis

CritiX, SnT, University of Luxembourg

Feb to Aug 2026

- Developed a C++ traffic coordination prototype with adaptive signal control, failure detection and vehicle rerouting.
- Tested faulty and compromised roadside units in VEINS, SUMO and OMNeT++ to evaluate failover and traffic flow.

Malicious APK Analyst

TruX, SnT, University of Luxembourg

Apr to Jul 2025

- Analysed smali code in 1,000+ malicious APKs, extracted IPs, domains and hashes, and mapped behaviour to MITRE ATT&CK.
- Validated findings with jadx, Androguard, VirusTotal and FlowDroid. Documented indicators and detection recommendations in analysis reports.

Senior System Associate

Infosys, India

Nov 2023 to Jul 2024

- Resolved IAM, firewall and VPN requests through ServiceNow, applying the principles of least privilege and role based access control.
- Reviewed Azure access permissions and security alerts. Automated recurring access checks with PowerShell and Bash.

Operations Executive

Infosys, India

Jul 2021 to Nov 2023

- Contributed to backend application development to support business requirements.
- Tracked SLA risks, followed up with stakeholders and prepared PMO reports. Supported internal control reviews.

Main projects

Fault tolerant traffic coordination

Developed and evaluated a traffic coordination prototype to study system resilience when roadside units failed or were compromised.

CaFA, Cost aware attack modelling

Modelled cost aware attack scenarios using CaFA and showed how targeted cost increases eliminated viable attack vectors in the evaluated scenarios.

Baron Samedit & network security labs

Reproduced CVE 2021 3156 and verified its patch. Tested ARP spoofing and HTTPS/TLS countermeasures.
